

Direct Bond Windows

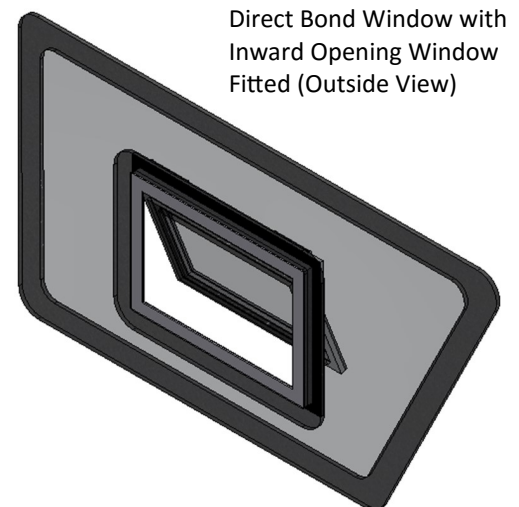

Direct Bond Windows are available in a variety of glass thickness from 6mm. Other options for glass are laminated and double glazed units, this also includes Stepped Double Glazing. Glass can be manufactured to any shape or size required.

The glass bonds directly to the hull or superstructure and when fitted within rebates allow the windows to fit flush with the hull.

All direct bond windows can have a digitally printed border with dot fade out if required.

Digital Printed Borders

Direct Bond Window with Inward Opening Window Fitted (Outside View)
