

The Clamp Shut Sliding window is an opening window specifically designed to provide the same level of water integrity expected from a fixed window, but with all the benefits of an opening window so often specified for the helmsman's position. Exceeding ISO 12216 Water-tightness Test Class 2, the Clamp Shut Slider's innovative design can be fitted to any hull type (new or existing), making it the perfect addition for commercial vessels operating in rough conditions.

The Clamp-Shut Slider uses Seaglazes' Series 11 robust Clamp-in frame section which can accommodate toughened and/or laminated glass up to 10mm thick. All joints are welded to reduce the risk of leaks, whilst the frame is fully anodised to protect against corrosion and may be powder coated in any RAL colour.

The design of the window gives special consideration to ease of installation and maintenance: Seaglaze's easy to install Clamp-in extrusions are up to 50% quicker to fit, provide a great appearance and are less likely to leak as the fastenings don't pierce the hull. Incorporating customer feedback, the Clamp Shut Slider is designed to be completely serviceable without the need to remove post installation (including replacing the glass).

**STANDARD DESIGN FEATURES**

- Tested in accordance to ISO12216 Water tightness test Class 2.
- Robust, elegant design.
- Easy installation and maintenance.
- Choice of finish.
- Range of glazing options.
- Made to any size within a wide range.
- Uses Seaglaze Clamp-in section frame.
