

Seaglaze to show new “Clamp-Shut Slider” Window at Seawork 2010

Article release date: 7th June 2010

Seaglaze will be releasing their new “Clamp Shut Slider” Windows at Seawork 2010 – an opening window specifically designed to provide the same kind of water-tightness and security that would be expected from a fixed pane window but with the benefits of improved ventilation, so often specified for the helmsman position in a wheel house. Tested to ISO 12216 Water-tightness Test Class 2, the “Clamp Shut Slider’s innovative design can be fitted to existing GRP, Steel or Aluminium boats when undergoing refit or fitted to new craft under build.

Alastair Clayton – Seaglaze Managing Director said “The Clamp Shut Slider Window is based on a proven design successfully deployed for the past 4 years on work boats operating the roughest conditions in the North Sea. Productising the design was the natural next step in meeting our customers needs for watertight integrity in an opening window.”

The “Clamp-Shut Slider” can accommodate toughened and/or laminated glass up to 10mm think, all joints are welded to further reduce the risk of leaks, and uses fully anodised frames which can be powder coated in any colour to suit the customer requirements. The design of the window gives special consideration to the ease of installation and maintenance: the windows uses Seaglaze’s easy to install “Clamp-in” frame section and all parts are serviceable without the need to remove the window.
