

The Series 10 is the most lightweight and smallest clamp in section we have to offer. This section is recommended for coastal and offshore craft as well as other applications where a small, lightweight section is required.

The Series 10 frame is solidly constructed from aluminium. As a clamp in section, there are no external fastening holes. Therefore a common source of leaks has been eliminated. Clamp in windows are approximately 50% to 70% quicker and easier to fit than through fix windows, requiring less man power.

This section accepts glazing from 4mm to 22mm in thickness. We offer a range of glazing to suit your preference from Toughened Safety Glass to Acrylic, BSMA to Polycarbonate.

This section is robust, durable and has a great appearance. The radius can be from 75mm up to 165mm. Windows manufactured from this section can be fixed, half drop, top hung, sliding or hopper unit.

We have two types of finishes to offer. These are either powder coating or anodised. The powder coating is to a RAL colour which suits your needs. A popular choice is a combination of both, an anodised base which is non corrosive and a powder coating finish with a colour to suit your requirements.

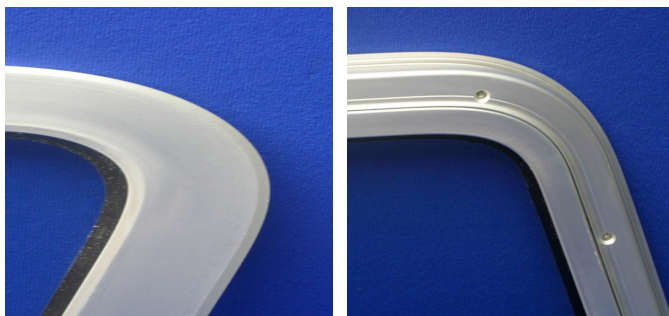

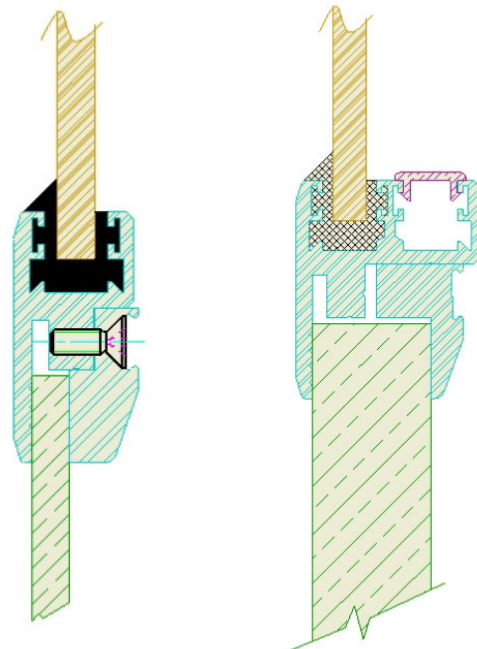

Please contact us for more information. In order for us to design the best windows to suit your requirements, please provide the aperture sizes, positioning, type of window, type of boat and where the boat will be operating.

**STANDARD DESIGN FEATURES**

- Durable and Robust
- 4mm to 6mm Glazing Material
- Range of glazing
- 75mm to 165mm radius
- Finish to your requirements
- Designs for various applications
- Quick and easy to fit
- Lightweight
- Great appearance
