

The Seaglaze Series 24 Heavy Duty Weathertight Door has been specifically styled to look simple and elegant and yet incorporate significant hidden strength.

A robust custom extruded aluminium section is used to form the outer edge of the door leaf. It has a welded flush panel on the outside and a removable panel on the inner face. Within the thickness of this section there is room for numerous dogging options, either operated individually or from a single handle/wheel; pneumatic or hydraulic operation is also available. A marine grade lock can be fitted, which can include common/master key facilities.

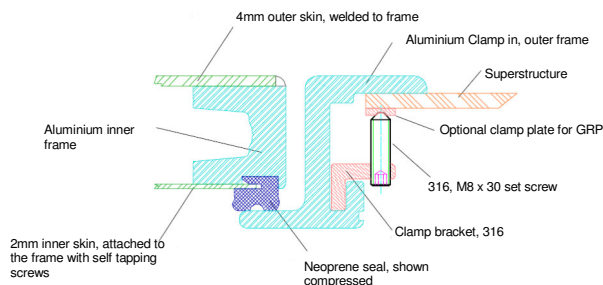

As with all our doors, the Series 24 offers broad design flexibility and can be fabricated to any size and specification. It can be left fully paneled or when specified, be fitted with a window. Hinging is normally by adjustable, polished, stainless bushed hinges, but a Pantograph version is also available. The Outer Frame may be either Through Fix or Clamp In.

To compliment the doors' surroundings, both the outer frame and door panels can be powder coated in a wide range of colours (including two tones) or if required can be left mill finish.

#### Seaglaze Series 24 Through Fix Style Door

#### Seaglaze Series 24 Clamp In Style Door
