

The Seaglaze Series 28 Watertight Door is suitable for all heavy-duty applications. It has been specifically designed to combine strength and reliability, whilst maintaining an unobtrusive stylish appearance.

This heavy-duty door is solidly constructed from robust extruded aluminium frame sections. It has a welded flush panel on the outside and a removable panel on the inner face. To ensure a reliable watertight seal the door is fitted with heavy duty cast handles and link operated dogs, closing on to nylon wedges.

The Series 28 offers broad design flexibility and can be fabricated to any size and specification. It can be either left fully paneled or when specified, be fitted with a glazed cast port. Whilst 3 dogs are fitted as standard, there is an option, depending on size, to fit 6 dogs.

To compliment the doors' surroundings, both the outer frame and door panels can be powder coated in a wide range of colours (including two tones) or if required can be left in mill finish.

Standard Series 28 Watertight Doors are suitable for the following typical high traffic access installations:

- Engine Rooms
- Watertight Bulkheads
- Machinery Spaces
