

This Series 3 is a lightweight and attractive section. Series 3 is a more advanced through fixed section, suitable for inland waterways and inshore seagoing pleasure craft.

The Series 3 frame section is solidly constructed from marine grade aluminium. Fixings are concealed behind a screw cover strip which stands 5mm proud of the superstructure. This section can have a radius as little as 51mm and windows are available with either mitred or radius corners.

This section accepts glazing from 4mm to 8mm in thickness or 5mm for a sliding window. Glazing is available in a wide range of options, from Toughened Safety Glass to Polycarbonate.

Series 3 windows are available as fixed, sliding, half drop, hinged or hopper units. For our sliding and half drop units, we utilise a plastic slider bearer and brush pile seals to ensure the units move smoothly.

At Seaglaze, we offer two types of finish. These are either powder coating or Anodising. The Powder Coating is available in a range of colours to suit your needs. The majority of our customers combine these two finishes to receive a non corrosive base through the anodising, and the colour of their preference with the Powder Coating finish.

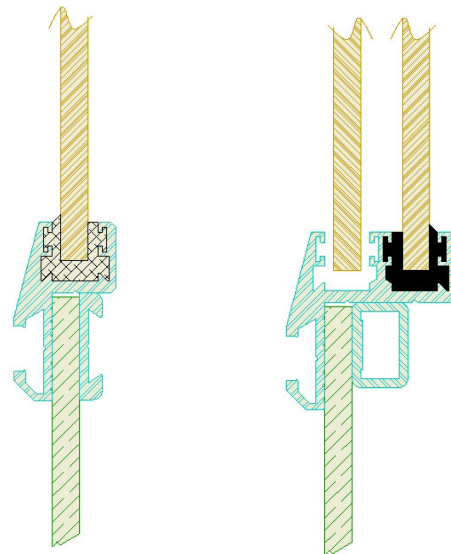

Please contact us for more information. In order for us to design the best windows to suit your requirements, please provide the aperture sizes, positioning, type of window, type of boat and where the boat will be operating.

**STANDARD DESIGN FEATURES**

- Mitred or Radius corners
- Range of finishes
- Range of Glazing materials
- Glazing between 4mm to 8mm
- Radius as little as 51mm
- Concealed fixings
- Lightweight
- Attractive
