

## Pop & Slide Window—

### Horizontal

The Pop & Slide window combines the weathertight integrity of our clamp shut windows, with a light-weight frame for ease of installation and versatility.

The sliding pane locks into place against a strong compression seal when in a closed position, “popping” open and smoothly sliding along a black delrin runner that is encapsulated within a black powder coated frame, which is hidden from view from the outside, by a black digitally printed ceramic ink border.

Our Hidden Frame and Direct Bond options ensure that the window is flush with the outside of the superstructure, producing an elegant, seamless finish.

This solution offers outstanding durability, as there are no external fixings which can be affected by the harsh marine environment with all frames being anodised and powder coated.

Available as horizontal or vertical half-drop.

*Seaglaze provides three sizes as standard, although custom sizes are*

Inside View

Outside View

Standard Sizes (mm)	Width	Height
Small	250	250
Medium	300	350
Large	350	400

- Uses a unique cam-lever system which locks the opening pane of glass tight against the seal when closed
- Weathertight resistance suitable for ISO12216 hose testing requirements
- Frames can be installed with 6mm or 8mm glass in a variety of tints
- Sleek frame design to maximise clear light view
- Supplied pre-fitted to the outer glass window
- Bottom rail captures minor water droplets when opening the window
